

CHEMICO-BIOLOGICAL INTERACTIONS

SUBJECT INDEX

VOLUME 62 (1987)

-
- trans*-4-Acetylaminostilbene, aromatic amines, RNA binding, DNA binding, guanine adduct, 143
- Active oxygen generation, 1,2,4-triaminobenzene, glutathione, pyridine nucleotides, 131
- Alcohols, quantitative structure-activity relationships, cytochrome P-450, molecular orbital parameters, 271
- Aldehyde dehydrogenase, phenobarbital, 3-methylcholanthrene, human hepatocytes, HepG₂, 75
- Aldehydes, methyl glyoxal, 4-hydroxyalkenals, phytohemagglutinin cultures, mixed lymphocyte cultures, [³H]thymidine incorporation, 217
- Alkylperoxyl radicals, peroxyl radicals, halogenated alkanes, oxidation kinetics, pulse radiolysis, toxicity, ferrous porphyrin, phenols, ascorbate, chlorpromazine, 227
- Amsacrine, antitumour, ethidium, fluorescence quenching, 45
- Antitumour, amsacrine, ethidium, fluorescence quenching, 45
- Aromatic amines, *trans*-4-acetylaminostilbene, RNA binding, DNA binding, guanine adduct, 143
- Ascorbate, alkylperoxyl radicals, peroxyl radicals, halogenated alkanes, oxidation kinetics, pulse radiolysis, toxicity, ferrous porphyrin, phenols, chlorpromazine, 227
- Aza-analogues, tilorone, intercalation, electrostatic DNA binding, IFN induction, 25
- Benzo[a]pyrene, cytochrome induction, carcinogen binding protein, 15
- Carcinogens, induction, dolichol, dolichyl P, microsomes, peroxisomes, 191
- Carcinogen binding protein, cytochrome induction, benzo[a]pyrene, 15
- CC-1065 (antitumor agent), DNA conformation, DNA binding, poly(dl-5BrdC) · poly(dl-5BrdC), 281
- Celiptium®, fetal thymidine kinase, creatine kinase, progesterone receptor, uterus, rat, 167
- Cell cycle, hepatocytes, mitosis, G₂ block, hepatocarcinogenesis, 99
- (*R,S*)-3-Chlorolactaldehyde, metabolic inhibition, renal metabolism, oxalate, (*R*)-3-chlorolactate, (*S*)-3-chlorolactate, 157
- (*R*)-3-Chlorolactate, metabolic inhibition, renal metabolism, oxalate, (*S*)-3-chlorolactate, (*R,S*)-3-chlorolactaldehyde, 157
- (*S*)-3-Chlorolactate, metabolic inhibition, renal metabolism, oxalate, (*R*)-3-chlorolactate, (*R,S*)-3-chlorolactaldehyde, 157
- Chlorpromazine, alkylperoxyl radicals, peroxyl radicals, halogenated alkanes, oxidation kinetics, pulse radiolysis, toxicity, ferrous porphyrin, phenols, ascorbate, 227
- Cholesterol, kidney, lead nitrate, hexose monophosphate, shunt, hyperplasia, 209
- Cisplatin, DNA-metal binding, metal radiosensitizers, nitroimidazoles, inhibition of restriction endonucleases, plasmid DNA, 117
- Creatine kinase, celiptium®, fetal thymidine kinase, progesterone receptor, uterus, rat, 167
- Cysteine, etoposide, thiols, glutathione, 237
- Cytochrome induction, carcinogen binding protein, benzo[a]pyrene, 15
- Cytochrome P-420, *trans*-4-hydroxyalkenals, cytochrome P-450, *trans*-4-

- hydroxy-2-nonenal, *trans*-4-hydroxy-2-hexenal, 59
- Cytochrome *P*-450, *trans*-4-hydroxy-alkenals, cytochrome *P*-420, *trans*-4-hydroxy-2-nonenal, *trans*-4-hydroxy-2-hexenal, 59
- , quantitative structure-activity relationships, alcohols, molecular orbital parameters, 271
- Detoxification, ozonides, glutathione, glutathione *S*-transferase, 3
- DNA binding, aromatic amines, *trans*-4-acetylaminostilbene, RNA binding, guanine adduct, 143
- , CC-1065 (antitumor agent), DNA conformation, poly(dI-5BrdC) · poly(dI-5BrdC), 281
- DNA conformation, CC-1065 (antitumor agent), DNA binding, poly(dI-5BrdC) · poly(dI-5BrdC), 281
- DNA-metal binding, metal radiosensitizers, cisplatin, nitroimidazoles, inhibition of restriction endonucleases, plasmid DNA, 117
- Dolichol, carcinogens, induction, dolichyl P, microsomes, peroxisomes, 191
- Dolichyl P, carcinogens, induction, dolichol, microsomes, peroxisomes, 191
- Electron spin resonance, glass fibres, hydroxyl radicals, 89
- Electrostatic DNA binding, tilorone, azanalogues, intercalation, IFN induction, 25
- Epoxide hydrolase, induction, liver, mice, 249
- Ethidium, amsacrine, antitumour, fluorescence quenching, 45
- Etoposide, thiols, glutathione, cysteine, 237
- Ferrous porphyrin, alkylperoxyl radicals, peroxyl radicals, halogenated alkanes, oxidation kinetics, pulse radiolysis, toxicity, phenols, ascorbate, chlorpromazine, 227
- Fetal thymidine kinase, celiptium®, creatine kinase, progesterone receptor, uterus, rat, 167
- Flourescence quenching, amsacrine, antitumour, ethidium, 45
- G₂ block, hepatocytes, mitosis, cell cycle, hepatocarcinogenesis, 99
- Glass fibres, hydroxyl radicals, electron spin resonance, 89
- Glutathione, etoposide, thiols, cysteine, 237
- , ozonides, glutathione *S*-transferase, detoxification, 3
- , 1,2,4-triaminobenzene, pyridine nucleotides, active oxygen generation, 131
- Glutathione *S*-transferases, ozonides, glutathione, detoxification, 3
- Guanine adduct, aromatic amines, *trans*-4-acetylaminostilbene, RNA binding, DNA binding, 143
- Halogenated alkanes, alkylperoxyl radicals, peroxyl radicals, oxidation kinetics, pulse radiolysis, toxicity, ferrous porphyrin, phenols, ascorbate, chlorpromazine, 227
- Hepatocarcinogenesis, hepatocytes, mitosis, cell cycle, G₂ block, 99
- Hepatocytes, mitosis, cell cycle, G₂ block, hepatocarcinogenesis, 99
- , MPTP, MPP⁺, metabolism, toxicity, 105
- HepG₂, aldehyde dehydrogenase, phenobarbital, 3-methylcholanthrene, human hepatocytes, 75
- Hexose monophosphate, shunt, kidney, cholesterol, lead nitrate, hyperplasia, 209
- Human hepatocytes, aldehyde dehydrogenase, phenobarbital, 3-methylcholanthrene, HepG₂, 75
- 4-Hydroxyalkenals, aldehydes, methyl glyoxal, phytohemagglutinin cultures, mixed lymphocyte cultures, [³H]-thymidine incorporation, 217
- trans*-4-Hydroxy-alkenals, cytochrome *P*-450, cytochrome *P*-420, *trans*-4-hydroxy-2-nonenal, *trans*-4-hydroxy-2-hexenal, 59
- Hydroxyanthraquinones, oxidative phosphorylation, mitochondria, 179
- trans*-4-Hydroxy-2-hexenal, *trans*-4-hydroxy-alkenals, cytochrome *P*-450, cytochrome *P*-420, *trans*-4-hydroxy-2-nonenal, 59
- trans*-4-Hydroxy-2-nonenal, *trans*-4-hydroxy-alkenals, cytochrome *P*-450, cytochrome *P*-420, *trans*-4-hydroxy-2-hexenal, 59
- Hydroxyl radicals, glass fibres, electron spin resonance, 89

- Hyperplasia, kidney, cholesterol, lead nitrate, hexose monophosphate shunt, 209
- IFN induction, tilorone, aza-analogues, intercalation, electrostatic DNA binding, 25
- Induction, carcinogens, dolichol, dolichyl P, microsomes, peroxisomes, 191
- , epoxide hydrolase, liver, mice, 249
- Inhibition of restriction endonucleases, DNA-metal binding, metal radiosensitizers, cisplatin, nitroimidazoles, plasmid DNA, 117
- Intercalation, tilorone, aza-analogues, electrostatic DNA binding, IFN induction, 25
- Kidney, cholesterol, lead nitrate, hexose monophosphate shunt, hyperplasia, 209
- Lead nitrate, kidney, cholesterol, hexose monophosphate shunt, hyperplasia, 209
- Liver, epoxide hydrolase, induction, mice, 249
- Mitosis, hepatocytes, cell cycle, G₂ block, hepatocarcinogenesis, 99
- Metabolic inhibition, renal metabolism, oxalate, (R)-3-Chlorolactate, (S)-3-chlorolactate (R,S)-3-chlorolactaldehyde, 157
- Metabolism, MPTP, MPP⁺, hepatocytes, toxicity, 105
- Metal radiosensitizers, DNA-metal binding, cisplatin, nitroimidazoles, inhibition of restriction endonucleases, plasmid DNA, 117
- 3-Methylcholanthrene, aldehyde dehydrogenase, phenobarbital, human hepatocytes, HepG₂, 75
- Methyl glyoxal, aldehydes, 4-hydroxyalkenals, phytohemagglutinin cultures, mixed lymphocyte cultures, [³H]-thymidine incorporation, 217
- Mice, epoxide hydrolase, induction, liver, 249
- Microsomes, carcinogens, induction, dolichol, dolichyl P, peroxisomes, 191
- Mitochondria, hydroxyanthraquinones, oxidative phosphorylation, 179
- Mixed lymphocyte cultures, aldehydes, methyl glyoxal, 4-hydroxyalkenals, phytohemagglutinin cultures, [³H]-thymidine incorporation, 217
- Molecular orbital parameters, quantitative structure-activity relationships, cytochrome P-450, alcohols, 271
- MPP⁺, MPTP, hepatocytes, metabolism, toxicity, 105
- MPTP, MPP⁺, hepatocytes, metabolism, toxicity, 105
- Nitroimidazoles, DNA-metal binding, metal radiosensitizers, cisplatin, inhibition of restriction endonucleases, plasmid DNA, 117
- Ozonides, glutathione, glutathione S-transferases, detoxification, 3
- Oxalate, metabolic inhibition, renal metabolism, (R)-3-chlorolactate, (S)-3-chlorolactate (R,S)-3-chlorolactaldehyde, 157
- Oxidation kinetics, alkylperoxyl radicals, peroxyl radicals, halogenated alkanes, pulse radiolysis, toxicity, ferrous porphyrin, phenols, ascorbate, chlorpromazine, 227
- Oxidative phosphorylation, hydroxyanthraquinones, mitochondria, 179
- Peroxisomes, carcinogens, induction, dolichol, dolichyl P, microsomes, 191
- Peroxyl radicals, alkylperoxyl radicals, halogenated alkanes, oxidation kinetics, pulse radiolysis, toxicity, ferrous porphyrin, phenols, ascorbate, chlorpromazine, 227
- Phenobarbital, aldehyde dehydrogenase, 3-methylcholanthrene, human hepatocytes, HepG₂, 75
- Phenols, alkylperoxyl radicals, peroxyl radicals, halogenated alkanes, oxidation kinetics, pulse radiolysis, toxicity, ferrous porphyrin, ascorbate, chlorpromazine, 227
- Phytohemagglutinin cultures, aldehydes, methyl glyoxal, 4-hydroxyalkenals, mixed lymphocyte cultures, [³H]-thymidine incorporation, 217
- Plasmid DNA, DNA-metal binding, metal radiosensitizers, cisplatin, nitroimidazoles, inhibition of restriction endonucleases, 117
- Poly(dl-5BrdC) · poly(dl-5BrdC), CC-1065 (antitumor agent), DNA conformation, DNA binding, 281

- Progesterone receptor, celiptium®, fetal thymidine kinase, creatine kinase, uterus, rat, 167
- Pulse radiolysis, alkylperoxyl radicals, peroxyl radicals, halogenated alkanes, oxidation kinetics, toxicity, ferrous porphyrin, phenols, ascorbate, chlorpromazine, 227
- Pyridine nucleotides, 1,2,4-triaminobenzene, glutathione, active oxygen generation, 131
- Quantitative structure-activity relationships, cytochrome *P*-450, alcohols, molecular orbital parameters, 271
- Rat, celiptium®, fetal thymidine kinase, creatine kinase, progesterone receptor, uterus, 167
- Renal metabolism, metabolic inhibition, oxalate, (*R*)-3-chlorolactate, (*S*)-3-chlorolactate, (*R,S*)-3-chlorolactaldehyde, 157
- RNA binding, aromatic amines, *trans*-4-acetylaminostilbene, DNA binding, guanine adduct, 143
- Thiols, etoposide, glutathione, cysteine, 237
- [³H]Thymidine incorporation, aldehydes, methyl glyoxal, 4-hydroxyalkenals, phytohemagglutinin cultures, mixed lymphocyte cultures, 217
- Tilorone, aza-analogues, intercalation, electrostatic DNA binding, IFN induction, 25
- Toxicity, alkylperoxyl radicals, peroxyl radicals, halogenated alkanes, oxidation kinetics, pulse radiolysis, ferrous porphyrin, phenols, ascorbate, chlorpromazine, 227
- Toxicity, MPTP, MPP⁺, hepatocytes, metabolism, 105
- 1,2,4-Triaminobenzene, glutathione, pyridine nucleotides, active oxygen generation, 131
- Uterus, celiptium®, fetal thymidine kinase, creatine kinase, progesterone receptor, rat, 167
